

The basic requirements to manage a multi-vendor network economically, effectively is in having ONE common central view of the overall network at a central location from which all management activities can be done.

The TM Forums Multi- Technology Network Management (MTNM) team is a CORBA based interface between the network management system (NMS) and the element management system (EMS).

The MTNM model covers management functions for SONET/SDH, DWDM and ATM and more. The main management areas are

- connection management
- NE and EMS configuration
- network inventory discovery
- equipment inventory management
- performance administration and monitoring
- alarm surveillance and event reporting

The output of the MTNM effort is document in

- MTNM Business Agreement (Currently TMF 513)
- MTNM Information Agreement (Currently TMF 608)
- MTNM Solution Set (Currently TMF 814)

For further information please refer to <http://www.tmforum.org/>

We are first and only in India to implement this standard for a leading telecom vendor in India.
